

IBM- Fedexcercise

Flickr

Files:

Required files in node modules

Package.json (all the dependencies with name and version those are required)

App.js (having Module of the fedexcercise application)

Index.html (Main page of the application to be opened to view and test the application)

Style.css (Main file containing all the CSS3 properties used)

FlickrController.js (Controller has factory injected in it which pull all the photos from NASA's flickr account)

FlickrDirective.js (Used <flickr> directive to make it reusable and isolation)

Flickrfactory.js (Factory uses key and userid of NASA to pull the photos from NASA's account using \$http.get method)

Flick.html (html template which contains html tags to be used in the place of <flickr> directive)

Features of FedExercise Application using AngularJS

- Reusable code – MVC model
- Used minified version of script files needed
- Browser compatible (Tested using Browserstack)
- Lower load time for improved performance
- Sorting by title (Ascending and descending order) and Search using Title text using filter
- Layout and style using CSS3 (Rotate on mouse-hover cards)
- No library like jQuery is used
- BootStrap
- Responsive for different devices.

RUN:

Open project in WebStorm and open index.html file.

Thank you.
